

The Life Cycle of Flowering Plants

All flowering plants go through the same stages of the life cycle.

The main stages are germination, growing and flowering, pollination, fertilisation and seed dispersal.

Can you design and create a way to represent the stages of the life cycle?

You could:

- Draw the different stages on a paper plate, adding arrows to show the order.
- Make a poster to show the different stages.
- Create a small book with one stage on each page.
- Write about what happens at each stage.
- Make a PowerPoint with one stage on each slide.

Or you could come up with your own idea!
