

## Adding and subtracting fractions

$$\frac{3}{8} + \frac{2}{8} = \frac{5}{8}$$

Remember we just add the numerators

↪

$$\frac{4}{10} + \frac{3}{5} =$$
$$\frac{4}{10} + \frac{6}{10} = \frac{10}{10} = 1$$

Remember if the denominators are different you will need to convert your fractions

Subtraction is exactly the same

$$\frac{6}{8} - \frac{2}{8} = \frac{4}{8} = \frac{1}{2}$$

$\frac{7}{10} - \frac{2}{5} =$

$\frac{7}{10} - \frac{4}{10} = \frac{3}{10}$

If the denominators are different you will need to convert them
